

1 Intro

Program to learn python, by watching some code, and answer question, what that code return. I do it myself. I does not believe, that this project someone want to fork.

2 What Is the Purpose of the Project

I init this project, to learn GTK with python. Also i learn SDLC, UML, Unit testing, and other parts of software development. I want create really program, with clean code, etc.

3 Scope of Work

UML diagram, UI in GTK, Python code. I need only my laptop, and github account(all done). I use git for version control, and github for server. VIM as textEditor+IDE.

4 Where Will the Work Be Done

my home.))

5 Tasks

- create UML diagrams
- write tests
- create main file
- create UI files
- connect ui to main
- Create makefile

6 Milestones

7 Deliverables

After i finish project, common deliverable it is application for students, to learn python. And common deliverable for myself, its experience in GTK.

8 Schedule

9 Standards and Testing

clean code, lint(for python), Unit tests, good ui(by doont make me think)

10 Define Success

11 Requirements

12 Payments
